Infectious Diseases

2017

Vircell

Founded in 1991, Vircell is a leading developer of ready-to-use kits for the diagnosis of infectious diseases with successful operations in over 85 countries.

Vircell, highly specialized in Research & Development, offers complete diagnostics solutions by means of different techniques. Since the beginning, we have focused on producing the highest quality reagents alongside providing accessible technical staff to ensure prompt and personal assistance in the use of these reagents.

Research & Development

In Vircell we devote our biggest efforts to R&D by investing over 20% of total sales to this activity every year. We are constantly working towards improving existing products and on the lookout for new product developments.

Production

The in-house production of all the antigens needed for the development of our kits enables Vircell to work with independence from external suppliers. This peculiarity makes us a flexible company and confers us the entire control over our products.

Quality Assurance

Quality in our activity sector means responsibility: Vircell fulfills this from the very beginning of the production process, being one of the main pillars of our business.

The reliability of all our kits is the result of strict quality controls according to international standards. Vircell counts with ISO 13485, ISO 14001, ISO 9001 AENOR-IQNet and ISO 9001 AENOR certifications and is involved in the process of implementation of GMP standards. Additionally, Vircell participates in several External Quality Assessment (EQA) Programs to ensure the reliability of our laboratory results.

Customer Orientation

Here in Vircell we take pride in our Customer Service Department, who strives to provide the best technical and scientific support possible in order you get on the spot solutions.

Infectious Immunology

6 VirClia®

The ultimate chemiluminescence solution for the automation of infectious serology in monotest format. Excellent for urgent samples or low-volume tests, VirClia® works directly from primary sample tube and each monodose includes calibrator and a negative control that enables the validation and interpretation of results for each individual sample, and is not based on stored curves.

9 ELISA

Enzyme-linked immunosorbent assays for antibody detection. The G/M presentation allows for all possible combinations of IgG and IgM determinations using a single kit.

11 DFA

Direct fluorescence assays for antigen detection in cell culture and clinical samples.

12 IFA

Indirect immunofluorescence assays to detect antibodies against viruses, bacteria, parasites and fungi. Single and multitests formats available.

14 Agglutination

The complete solution for the diagnosis of human brucellosis. Brucellacapt® has an excellent performance, specially in chronic cases, and great recognition in the scientific literature.

14 VIRapid®

Immunochromatographic tests for antigen and antibody detection. High value-added products in multitests format.

Molecular Diagnostics

15 Speed-oligo®

Oligochromatographic assays for the molecular multiplex diagnosis of infectious diseases. This unique PCR-based method coupled to a strip device enables an immediate, highly sensitive and specific multitest detection showing results 20 minutes after PCR.

16 AmpliRun®

Quantified positive amplification controls that contain the complete purified, microbial genome of the infectious agent.

20 AmpliRun® Total

Full process controls (extraction & amplification) containing the complete inactivated microorganism in a matrix that mimics human specimens.

Others

21 Transport Medium

Collection and transport system for viruses, chlamydia and mycoplasma.

22 Cell Lines

Accessible cell culture for human clinical virology. Ready-to-use and bulk presentations available.
